

SAMINA NAWAZ

Associate Android Developer (Kotlin / Jetpack Compose)

✉ saminagondal482004@gmail.com 📞 [03304525573](tel:03304525573) 📍 Islamabad, Pakistan 🌐 www.linkedin.com/in/samina-nawaz-a8316437b
🔗 github.com/Samina2004

PROFILE

A disciplined and tech-centric Android Developer specializing in native mobile engineering using Kotlin and Jetpack Compose. Proficient in building offline-first, highly scalable, and performance-optimized applications following MVVM architecture. Adept at integrating on-device Machine Learning (OCR), Generative AI pipelines, and cloud databases (Firebase). Possesses a strong visual layout sense to bridge the gap between clean code and fluid user interfaces.

Education

University of Sargodha	Bachelor of Information Technology (BS IT)
2022-2026	
SUPERIOR GROUP OF COLLEGES, MBDIN	FSc Pre-Engineering
2020-2022	

Projects

1. FinPilot AI – Smart Expense Tracker & Budget Manager (Personal Project)

Technologies: Jetpack Compose, Gemini AI SDK, ML Kit OCR, CameraX, Room DB, Dagger Hilt, StateFlow

 - Developed an offline-first financial assistant featuring real-time receipt processing via CameraX and on-device text recognition (Google ML Kit OCR).
 - Integrated Google Gemini AI SDK to analyze user spending patterns, stream automated financial saving tips, and predict future budget risks.
 - Built utilizing clean MVVM architecture with Room DB for caching and Dagger Hilt for dependency injection to ensure smooth performance.
2. AI-Powered Flood-Safe Route Planner(Final Year Project)

Technologies: Kotlin, Jetpack Compose, Google Maps SDK, Geofencing, Firebase, Live Data, MVVM

 - Engineered an intelligent navigation system that calculates and dynamically suggests flood-safe, risk-mitigated alternate routes for commuters during severe regional weather anomalies.
 - Integrated the Google Maps API with live data layer overlays to visually map, render, and update flooded zones and safety perimeters in real time.
 - Formulated a comprehensive academic review framework and research paper mapping regional infrastructure and data-driven flood management strategies.
3. Digital Tasbeeh Counter (Utility Project)

Technologies: Kotlin, Material Design 3, Jetpack Lifecycle Architecture, Shared Preferences

 - Built a lightweight, accessible utility application designed for perfect UI state preservation across full Android configuration changes and background lifecycles.
 - Optimized user interaction layers using Material 3 haptic feedback loops and gesture-driven state tracking.

TECHNICAL EXPERTISE

- Core Mobile: Kotlin, Jetpack Compose, Core Android SDK, Lifecycle, MVVM, StateFlow
- Architecture & DI: Clean Architecture principles, Dagger Hilt
- Local Caching: Room Database (KSP), Jetpack DataStore, Shared Preferences
- AI & ML Core: Google Gemini AI SDK, Google ML Kit (Text Recognition OCR)
- Device Hardware: CameraX API, Google Maps SDK, Geofencing, Location Services
- Cloud Backend: Firebase (Auth, Cloud Firestore, Cloud Messaging, Crashlytics, Analytics)
- Networking: Retrofit2, OkHttp Interceptors, KotlinX Serialization
- UI/UX Tooling: Adobe Illustrator, Photoshop (Vector asset generation & layout alignment)

ADDITIONAL CAPABILITIES & SOFT SKILLS

- UI/UX & Asset Design: Adobe Illustrator, Photoshop, Figma (Independent generation of application vector assets, launcher icons, and digital promo layouts).
- Developer Tools: Android Studio, Git/GitHub, Logcat, Layout Inspector, Postman.
- Core Competencies: Clean Architecture, MVVM Design Pattern, Offline-First App Development, REST APIs Integration.
- Soft Skills: Technical Problem-Solving, Analytical Thinking, Clear Developer Communication.
